IOT BASED SMART FARMING-ASSINGMENT -2

Build a python code, assume you get temperature and humidity values(generated with random function to a variable) and write a condition to continuously detected alarm in case of high temperature

Code:

```
Import random

Temperature = random.randint(0,200)

humidity = random.randint(0,100)

print("The recorded temperature in Fahrenheit= ",temperature)

print("The recorded humidity in percentage= ",humidity)

if(temperature>110 or humidity>30):

     print("HIGH TEMPERATURE-Alarm ON")

else:

     print("Alarm oFF")
```
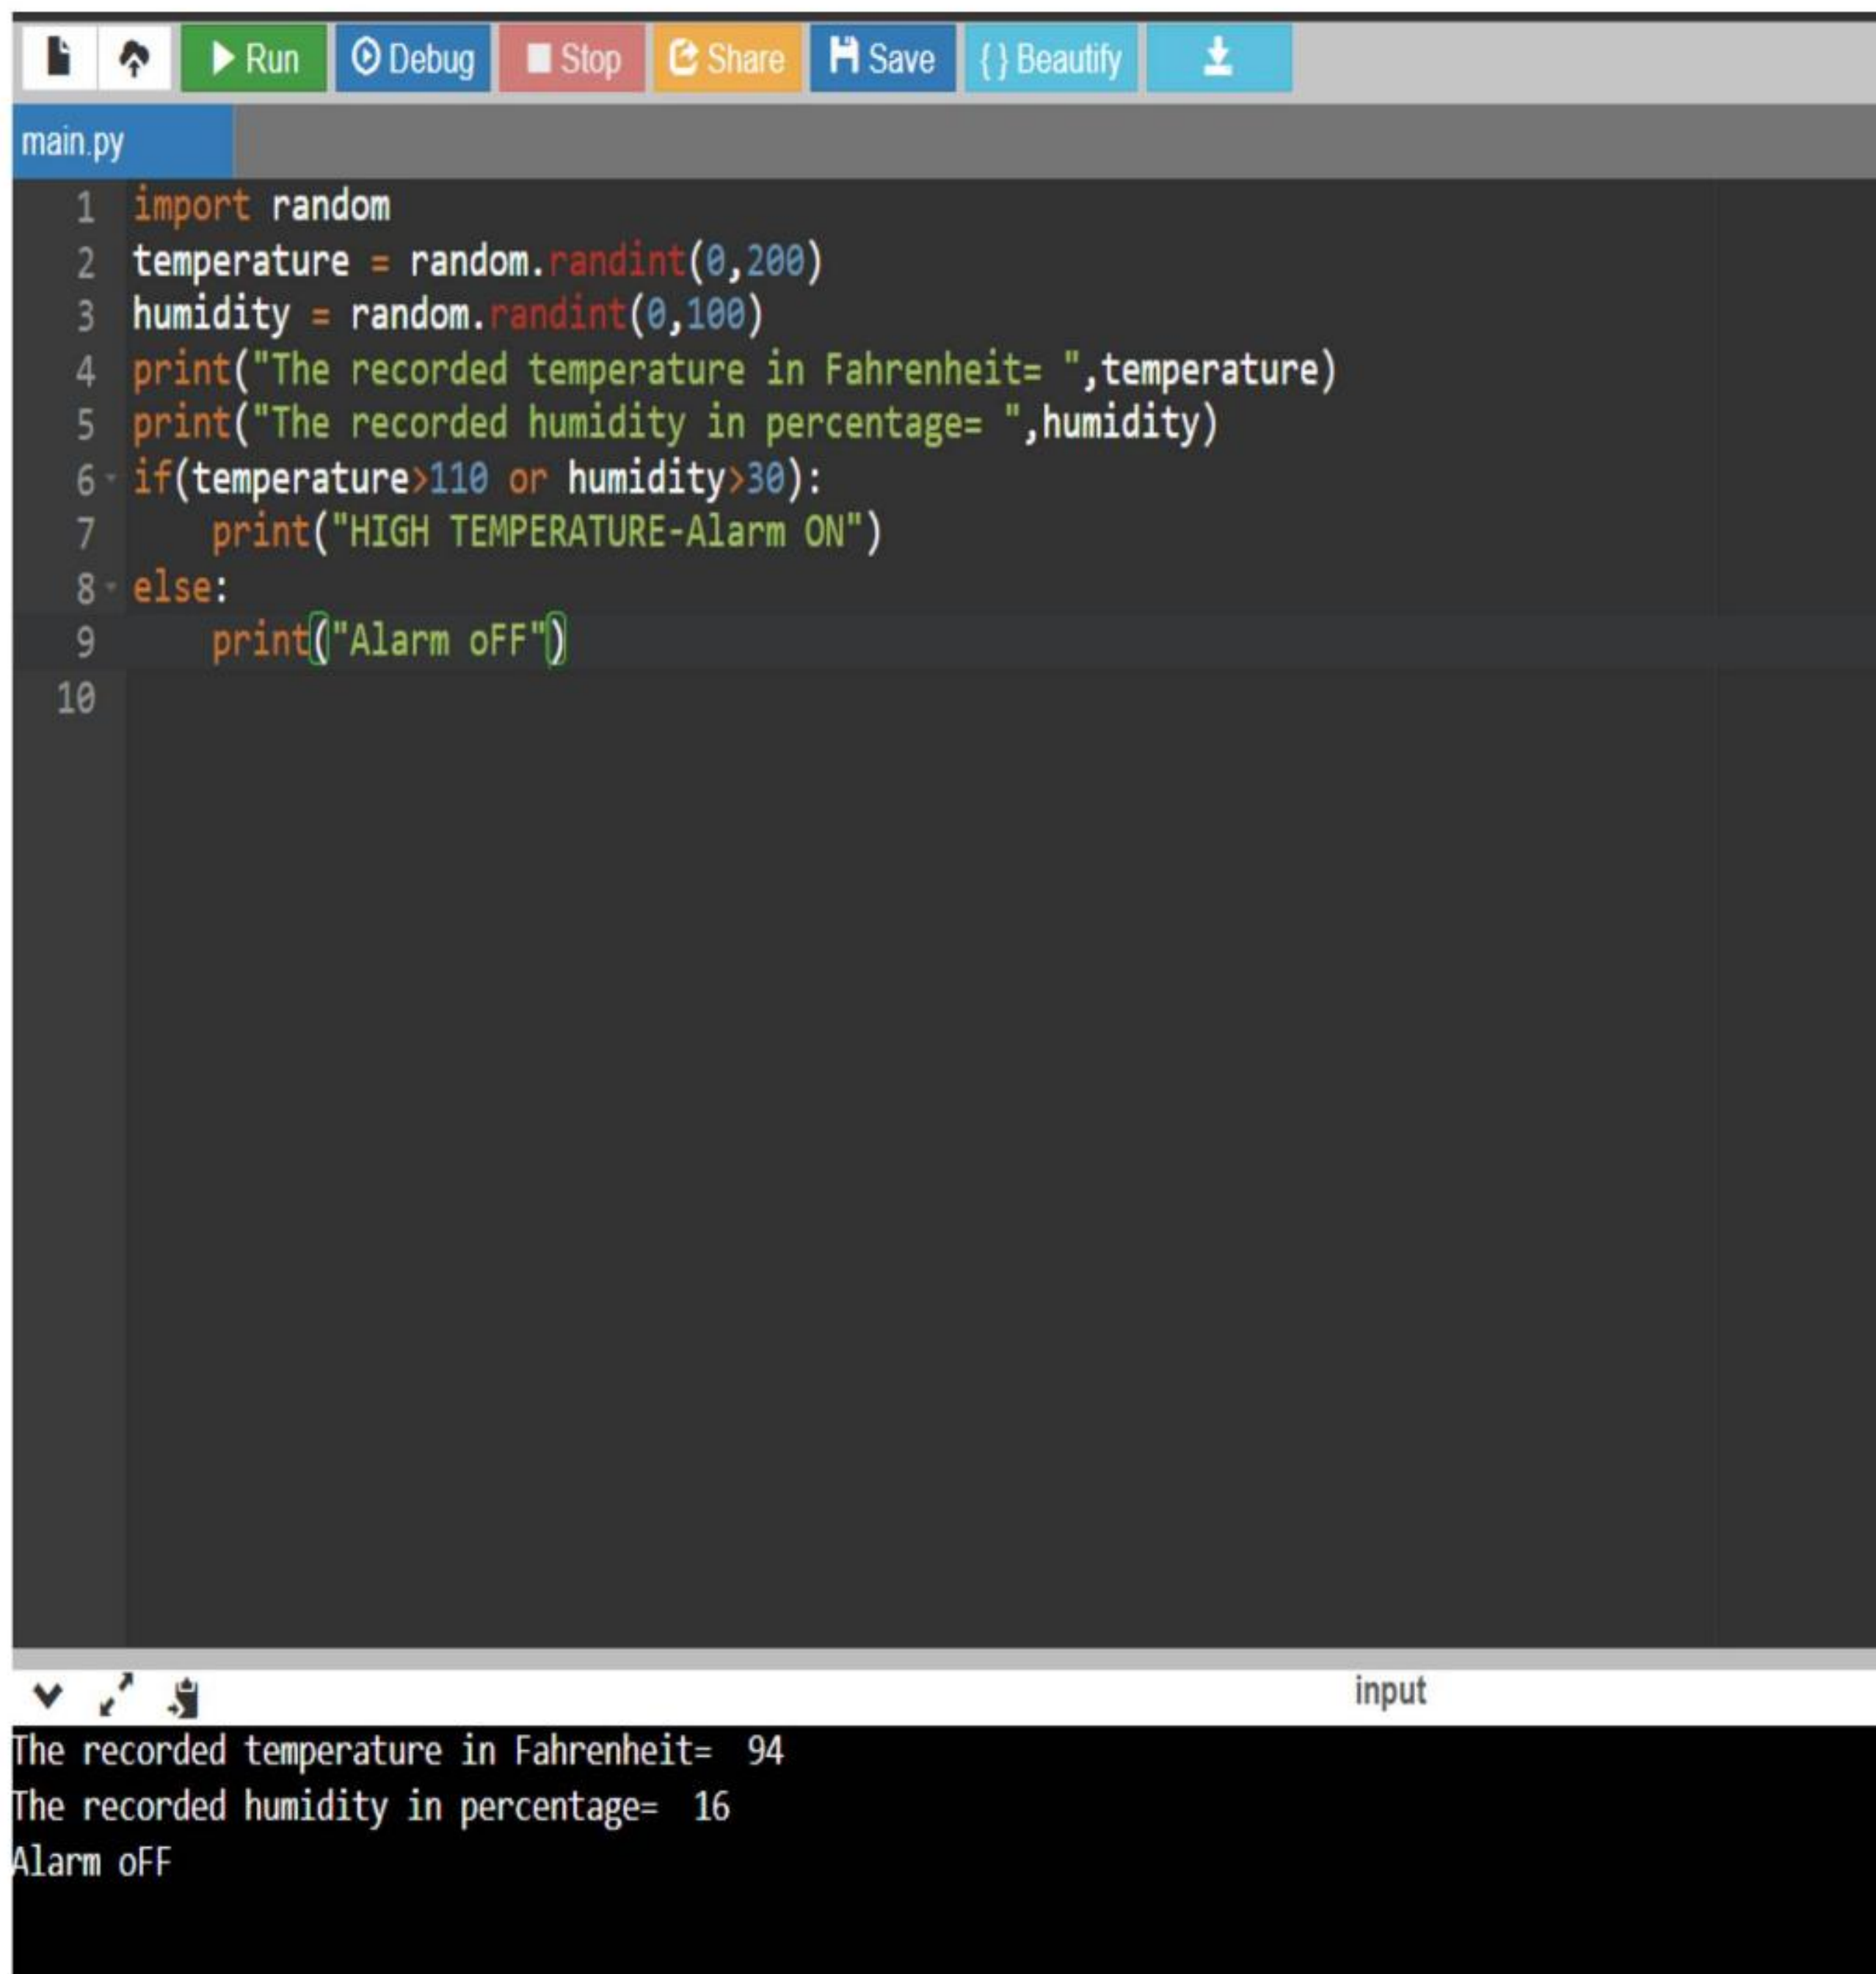

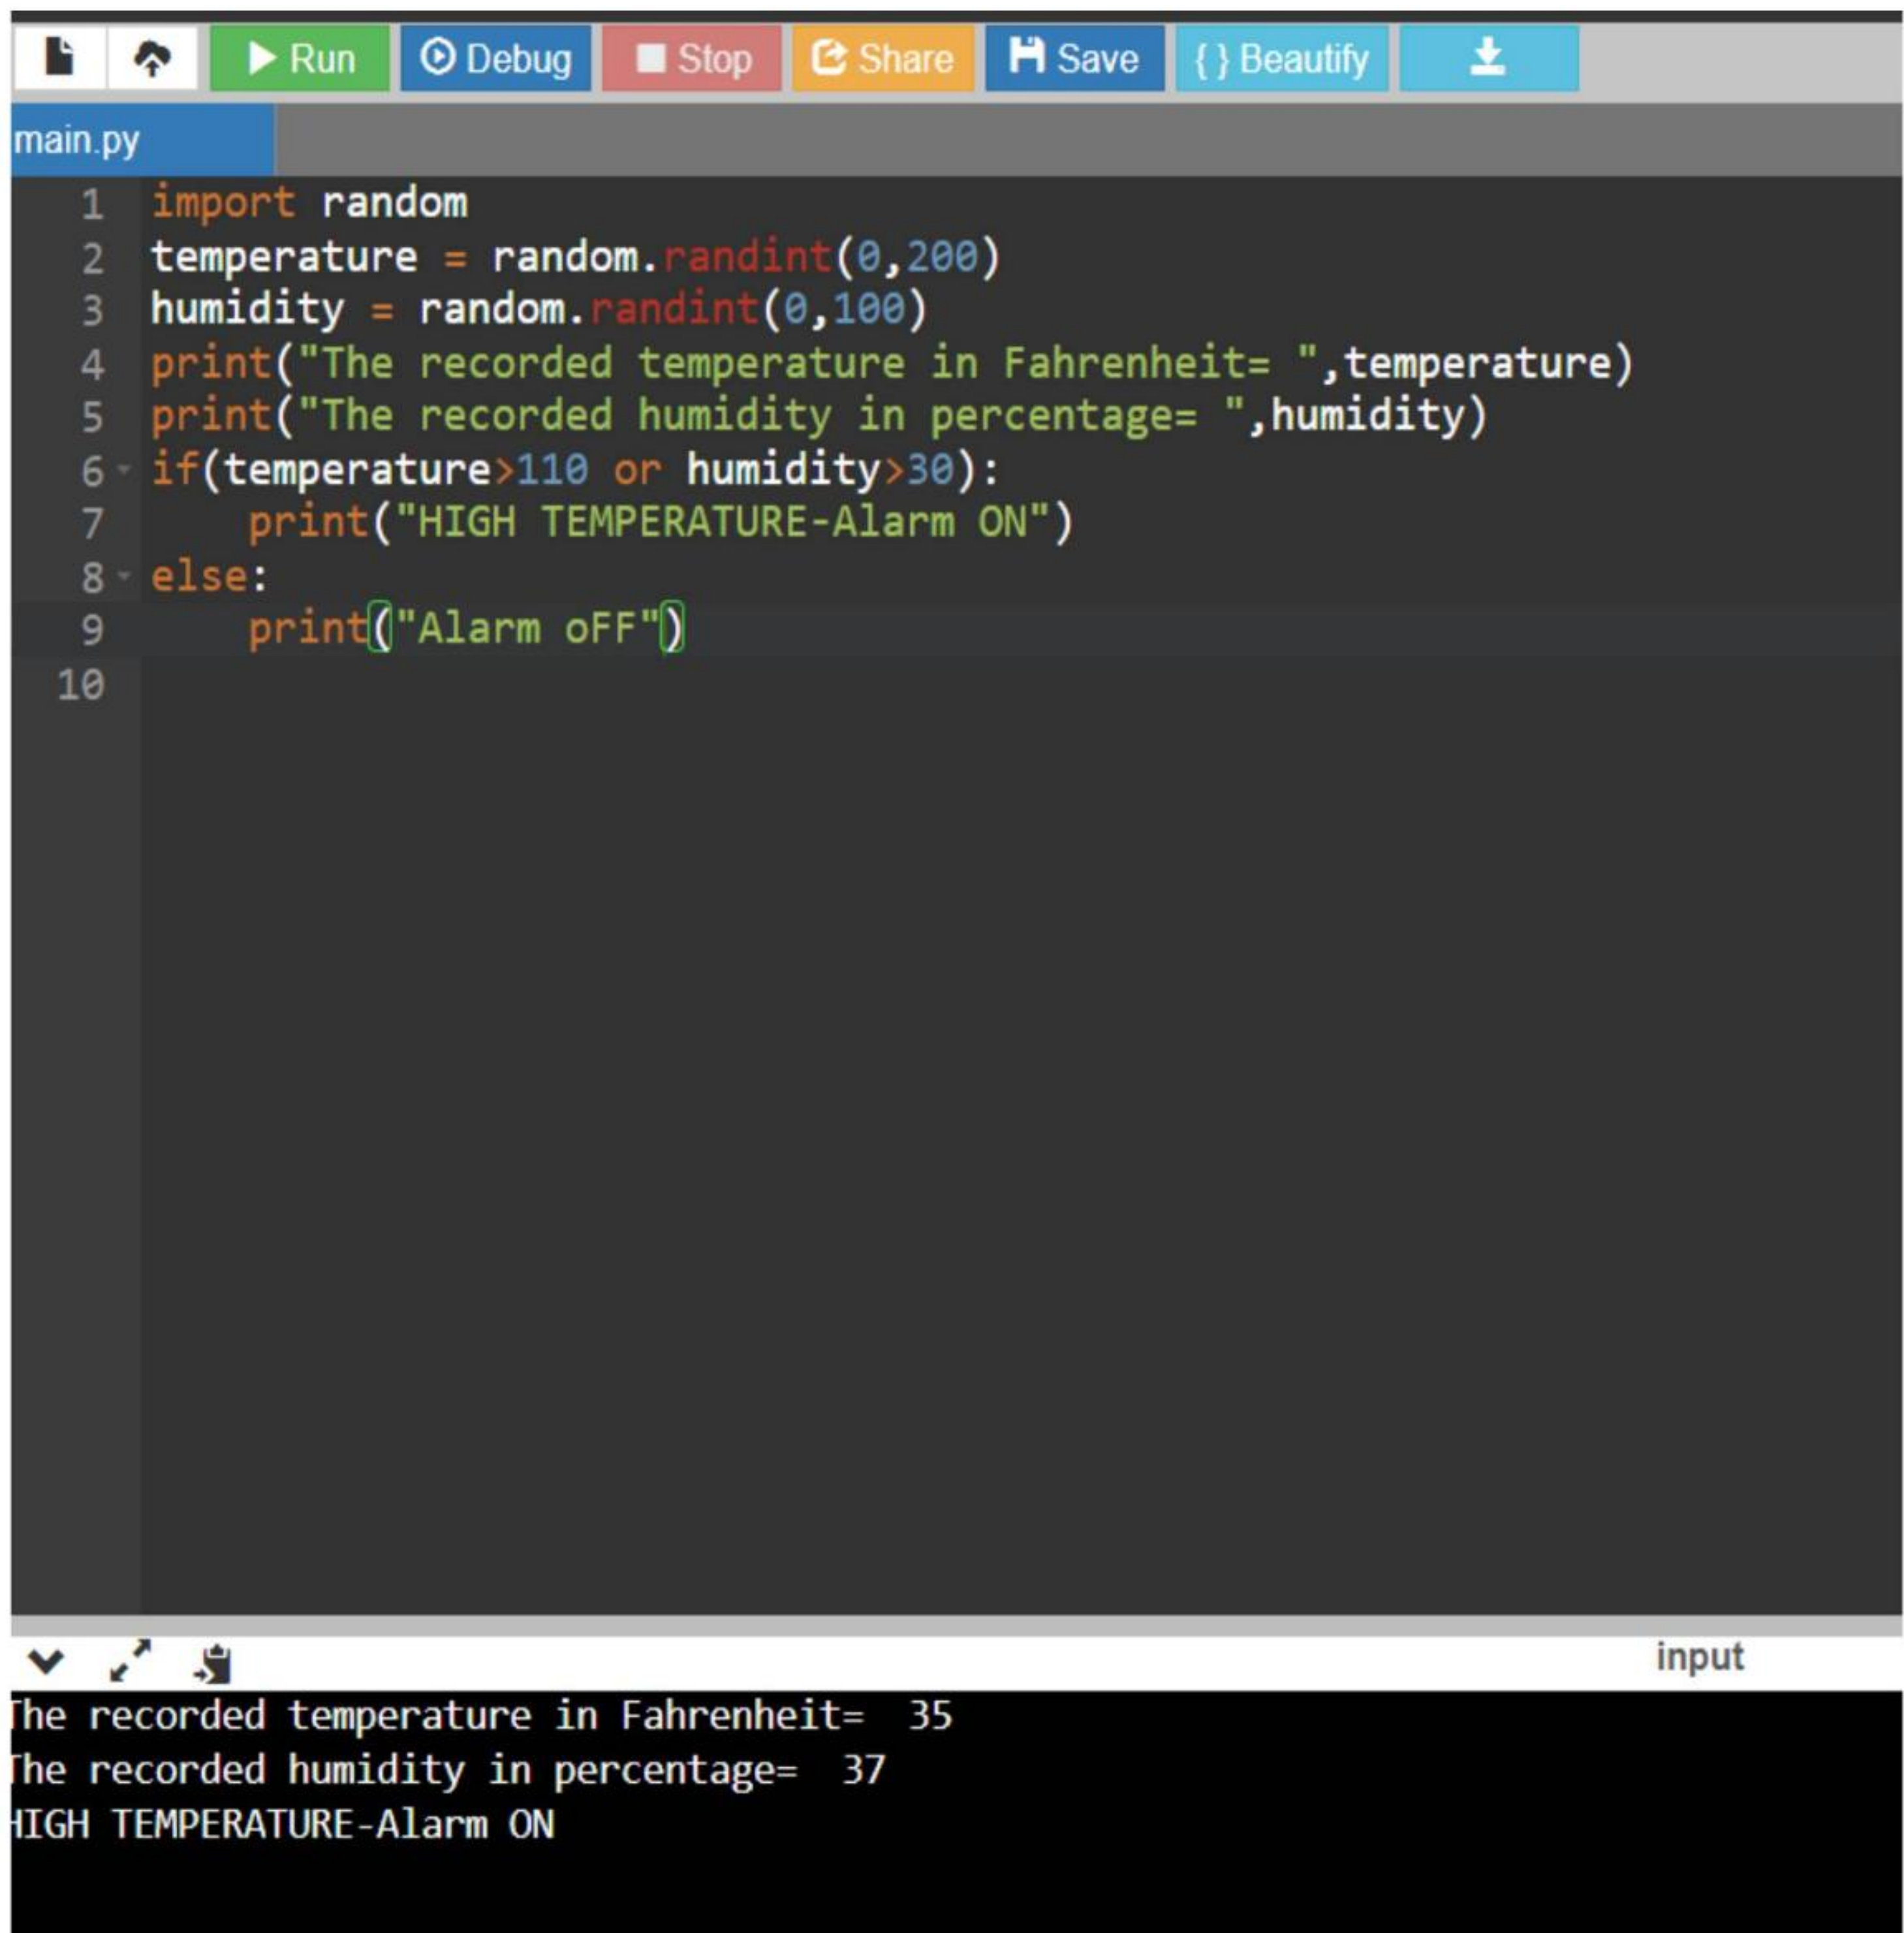

output:CASE 1: ALRAM-OFF

```python
import random
temperature = random.randint(0,200)
humidity = random.randint(0,100)
print("The recorded temperature in Fahrenheit= ",temperature)
print("The recorded humidity in percentage= ",humidity)
if(temperature>110 or humidity>30):
    print("HIGH TEMPERATURE-Alarm ON")
else:
    print("Alarm oFF")
```

```
The recorded temperature in Fahrenheit=  94
The recorded humidity in percentage=  16
Alarm oFF
```

CASE 2: ALRAM-ON

| | | ▶ Run | ⊙ Debug | ■ Stop | ⬧ Share | 💾 Save | { } Beautify | ⬇ |

main.py

```python
1  import random
2  temperature = random.randint(0,200)
3  humidity = random.randint(0,100)
4  print("The recorded temperature in Fahrenheit= ",temperature)
5  print("The recorded humidity in percentage= ",humidity)
6  if(temperature>110 or humidity>30):
7      print("HIGH TEMPERATURE-Alarm ON")
8  else:
9      print("Alarm oFF")
10
```

input

```
The recorded temperature in Fahrenheit=  35
The recorded humidity in percentage=  37
HIGH TEMPERATURE-Alarm ON
```
